Sat, 10 Nov 2018 00:47:00 GMT AGROFORESTRY - TetGen computes the Delaunay tetrahedralization of 40,000 randomly distributed points in 4.8 seconds. It used 3 minutes to compute the Delaunay tetrahedralization for 1 million points. The robustness is achieved by the use of the adaptive exact arithmetic [25] code for performing two geometric predications, i.e., orientation and insphere
